

ABOUT

Go2Care provides affordable & effective access to TeleRehabilitation & Injury Prevention Programs. Using everyday technology, employees can gain access to physical therapists, occupational therapists, and other occupational health specialists in any location they find themselves. Go2Care treats and manages common conditions remotely through the use of evidence-based applications.

NETWORK

Our specialty provider network extends across all 50 states. State board language is not a requirement for application of tele-rehabilitation services. However, some states require first visit in-person.

HOW IT WORKS

Go2Care uses an algorithm-based triage system to determine which conditions are appropriate for self-service education, remote treatment (First Aid vs. Medical), or referral to an on-site provider/standard medical system. If you have a prescription for therapy, you can use it here.

Common OSHA recordable injuries such as tendonitis, sprains/strains can be treated remotely.

COMMONLY TREATED CONDITIONS

1. **Chronic Conditions** (Diabetes, Obesity, COPD, Heart Disease)
2. **Non-Surgical Injuries** (Joint & Muscles, Sprains and Strains)
3. **Post-Surgical Orthopedic Conditions** (Spinal, Hip, Knee, Shoulder, and Hand)
4. **Pain Management** (Acute, Chronic, Pre/Post Surgery or Injury)
5. **General Medicine** (Post Amputation, Age Related, Muscle Weakness, Balance)
6. **Early Signs & Symptoms** (Ergonomics, Energy Conservation, Safe Lifting)

Runaway Costs

Go2Care saves on service utilization, staffing, scaling, and overhead costs.

33%

Workers aged 50+ by 2016. 80 % have chronic health conditions, 60% higher claim cost than < 50 years.

40%

Workforce is obese. Obese workers file 2x as many claims with costs 7x higher.

1904.7

OSHA recording criteria leads to common easy-to-treat conditions being over treated.

Rising Claim Severity (YTD) and Frequency of MSD & Ergonomic Injuries.

SOLUTIONS

Manage common conditions without needing to visit a clinic or ignoring potentially costly issues. Go2Care offers two distinct solution sets that consist of direct and indirect methodologies, depending on individual case appropriateness.

Telerhab provides access to physical and occupational therapists on demand using any modern technology with a camera. While most common physical rehab conditions can be addressed through Go2Care's platform, we identify issue circumstances which are too complex for effective, remote treatment. This program includes Initial Condition Triage, which determines appointment length and number of visits expected to provide best outcomes at lowest cost. Virtual treatment can include: Initial Evaluations, Functional Capacity Testing, Pain Management, Therapeutic Exercise Programs, Care Plans, Post-Operative Care, Durable Medical Equipment, Work Modifications, Physical Agent Modalities, Brace Recommendations/Ordering, Return to Work planning, and more.

can

Injury Prevention Program is an OSHA compliant solution to reduce early signs of discomfort and enhance employee wellness. For employees who do not meet the requirements of an OSHA recordable event, injury prevention solutions enhance worker performance & productivity. This program includes self service access to our platform where employees can obtain Chronic Condition Packages, Posture & Ergonomics Support, Health & Wellness Coaching, Nutrition, Work Strategies, OSHA First Aid Support, and more. The toolsets include Instructional Handouts; Electronic Attachments, Audio/Visual Demonstration and Health Management Guidelines.

Start accessing affordable Rehab solutions.
